

The Sustainability program is gaining traction and sees promise in its compost and carpooling programs.

14

Tons of GHG emissions prevented by employee carpooling.

20%

Employees who participated in the carpool program - at least 41 employees logged a carpool.

251

Pounds of waste sorted in our first-ever formal waste audit.

PROJECTS	DETAILS	OUTCOME
Guest and Employee Engagement	Green Team and the carpool program help employees engage with our sustainability efforts.	8 employees participated in Green Team activities, and 41+ logged carpools.
Transportation Efficiency	Employee carpool program with incentives and priority parking.	14+ tons of emissions avoided with employee carpooling
Waste Reduction	A first-ever audit of the Main Lodge wastestreams revealed important data for future waste reduction measures.	Landfill-bound paper (28.7%) and food waste (41.4%) are two of our biggest waste areas. We will take steps to address these next season.
Energy Efficiency	Galena, Wizard, and Chuter lift drive upgrades.	Upgrading old lift drives increased efficiency on these chairlifts, reducing energy used by thousands of kWh.
Greenhouse Gas monitoring	We are tracking Scope 1 and 2 GHG emissions and will treat this year as a 'baseline' to inform future reduction measures.	The need to measure fuel used for main lodge heating became clear; we will add that as a project for next season.

Acknowledgements

We are grateful to the NSAA for the award of their Sustainable Slopes grant, which will aid in the purchase of an industrial compost machine and support the launch of an on-mountain compost program next season.
